

# TORNADO CLEANZE

THICK SODIUM HYPOCHLORITE GEL WITH "SUPER STICKABILITY"

## INTRODUCTION

Softwashing is the use of powerful cleaning agents to control organic growths, such as algae, lichen and mould, on exterior hard surfaces. These give rise to the unsightly black, green, red and yellow discolouration that spoils the appearance of a property.

Some growths can be difficult to remove easily, quickly and safely using conventional methods. Tornado Cleanze is the solution, offering targeted, precise cleaning with no overspray.

## WHEN TO USE

Tornado Cleanze can be used as a stand-alone cleaner on render, sandstone, capping stones, chimneys, brickwork, window sills, some plastics and most other exterior hard surfaces.

It can also be used as a "spot cleaner" in conjunction with one of our other softwash products.

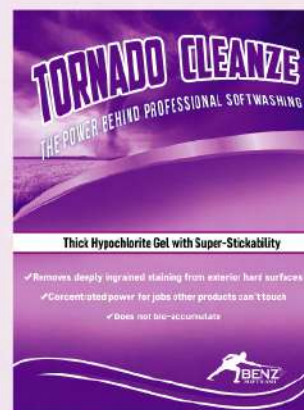

## HOW IT WORKS

Tornado Cleanze is a non-penetrating gel that stays on the surface, allowing a long contact time. This gives it a remarkable power to oxidise and remove the discolouration.

Benz Softwash Ltd.,  
Whitegate, Midletan,  
Cork, P25 PR50, Ireland.

## USE-BY DATE:

5 litre containers. Best used within 3 months of manufacture when stored in the original, unopened container.

## COVERAGE

Tornado Cleanze is a concentrated, ready-to-use gel and does not need diluting. A little goes a long way. 1 litre will cover 6 metres<sup>2</sup> of render or brickwork, 10 metres<sup>2</sup> of sandstone, or 10 capping stones.

## APPLICATION

- By brush or roller, or a combination of both, to leave a thin film on the surface. Can be applied with a water-fed pole brush and low-pressure pump.
- Because Tornado Cleanze is a gel it stays where it's applied, even on vertical surfaces, and is slow to evaporate.
- If the surface is warm, pre-wet with water before commencing treatment. If hot, keep the surface continually damp.
- If the discolouration is particularly bad, agitate with a soft brush after 10-15 minutes.
- Protect areas that could be affected by spillages, or run-off after rinsing, e.g. lead flashing.
- Rinse thoroughly after activation.

## RESULTS

Black and green discolouration will disappear from most surfaces within 30-60 minutes in mild temperatures, longer in cooler weather. Heavy red stains may turn pink at first, then fade in 24-48 hours. Sometimes, a second application may be needed.

## PERMANENTLY CLEAN

Keep surfaces permanently clean by spraying with Benz Perma Cleanze or Bio Cleanze every 6-24 months.
